Introduction

As the popularity of cryptocurrency grows the need for a more comfortable way to use them has become urgent. Not so long ago it was difficult to imagine that it would be possible to pay with Bitcoin or some other popular cryptocurrency in a shop.

Crypt2Pos platform provides this possibility for all those who want it.

About the project

Crypt2Pos – the platform that allows shops to connect their POS terminal to accept payment in the crypto currency, and give customers the opportunity to pay for goods and services in crypto currency. Crypt2Pos mobile application will be available for download soon.

Market analysis

5 million people use cryptocurrency everyday. Analysts claim this number will exceed 200 million by 2025.

There are currently a couple of services on the market that plan to provide or already provide the ability to make payments with cryptocurrency. Most of them have a number of disadvantages. We decided to name a couple of them:

Very slow transaction speed

Difficult to use

Necessity to use special programs

A small choice of cryptocurrencies for payments

Opaque introduction to the shops

Mission

The main mission of the Crypt2Pos - project is to create an opportunity for customers to pay with cryptocurrency and an opportunity for salesmen to accept cryptocurrency payments.

Very soon, according to our forecast, it will be possible to exchange any popular cryptocurrency to any local fiat currency anywhere in the world where it is possible to make non-cash payments via non-contact terminals. These type of transactions will be faster, cheaper and safer than similar operations done in any bank with fiat currency. Moreover, the salesmen will not notice any difference: they will receive their payment in the currency that is chosen in the settings on their platform.

Benefits

Cryptocurrency benefits over fiat money

Transaction speed

Commission cash-back after transaction

Transaction safety

Comfortable to use

Platform's benefits

- **Ability to make payments with popular cryptocurrency**

BTC,ETH, BITCOINCASH, with Blockchain.info or apps Blockchain Mobile Wallet

- **Utilization of the top mining pools**

larger cash-back and faster transactions

- **Minimal commission for cryptocurrency exchange**

Crypt2Pos technological platform is designed based on a number of algorithms that provide the most effective matching of currency rates and creates offers for P2P exchange via third-party crypto-exchange

- **OpenAPI for developers**

Ability to launch different financial products and services based on the project

Application examples

It is currently impossible to pay for goods or services or replenish your account with cryptocurrency. A cryptocurrency wallet owner can exchange cryptocurrency on the exchange himself and use fiat money for payments. It will take a lot of time to do the transaction and visit an exchange point. It's unlikely someone will follow this procedure to buy something in a shop.

It is possible to do all of this instantly using Crypt2Pos app. After the user chooses any cryptocurrency in the Crypt2Pos app the platform does everything itself, including exchanging and paying in fiat currency. The user only needs to press the «Pay» button and hold his phone close to the terminal.

The Crypt2Pos platform can be used for the following operations:

- 1** Payment by crypto currency at any point where POS terminals are connected to the Crypt2Pos platform
- 2** Transfers to crypto-currency wallets or bank cards
- 3** Conversion of various types of crypto currency

Functions

For users

Crypt2Pos will be available for download in the IOS and Android app shops and will be ready for use right after the installation.

The current functions are provided for the users of the mobile app platform:

- Paying for goods and services in shops
- Profitable exchange rates of cryptocurrencies
- Minimal commission transactions to block-chain wallets
- Direct service payment
- Payments via QR-code

In the case of exchanging cryptocurrency the Crypt2Pos platform connects with the cryptocurrency exchange and exchanges the desired amount of cryptocurrency at the most profitable rate at maximum speed.

For business

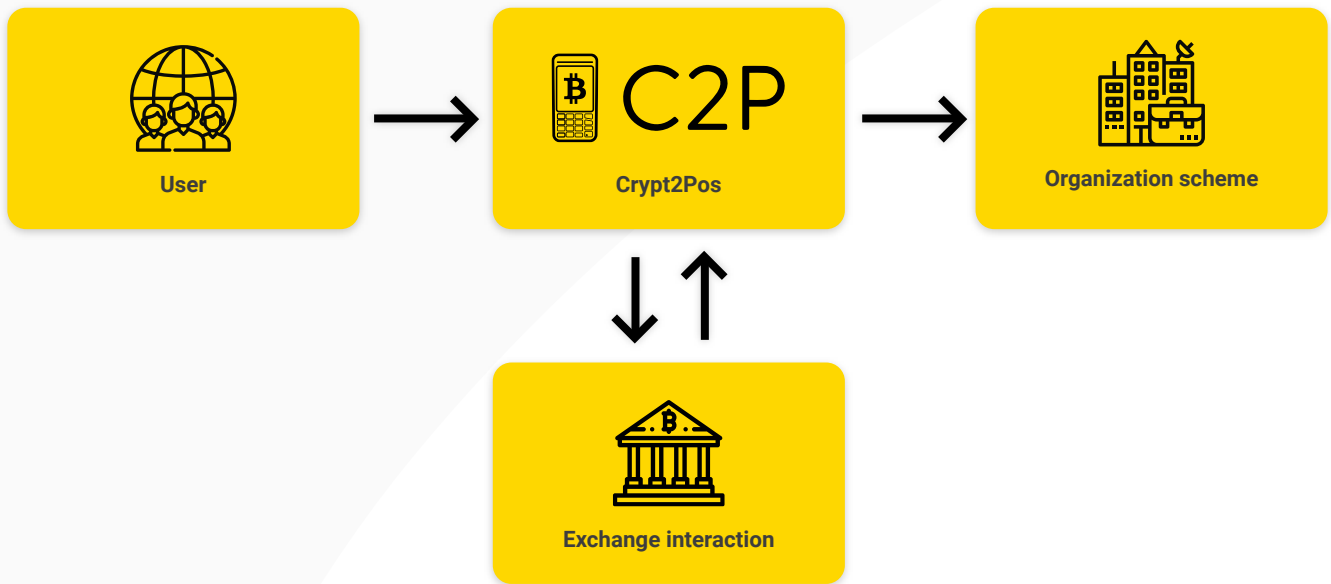

In order to use the platform an organization will have to install a payment terminal.

Depending on the original terminal's settings the payment will be done in two ways:

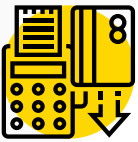

Directly to the organization's wallet in the seller's currency

Converting to the required currency via the exchange at the most profitable rate

The platform's functions allow organizations to do the following:

-  Receive payments via terminals
-  Convert to the desired currency for later withdrawal
-  View transaction history
-  Manage payment information
-  Filter currencies, payment time, purchase methods etc.

Token's role

CRPOS token is used in the framework of the platform.

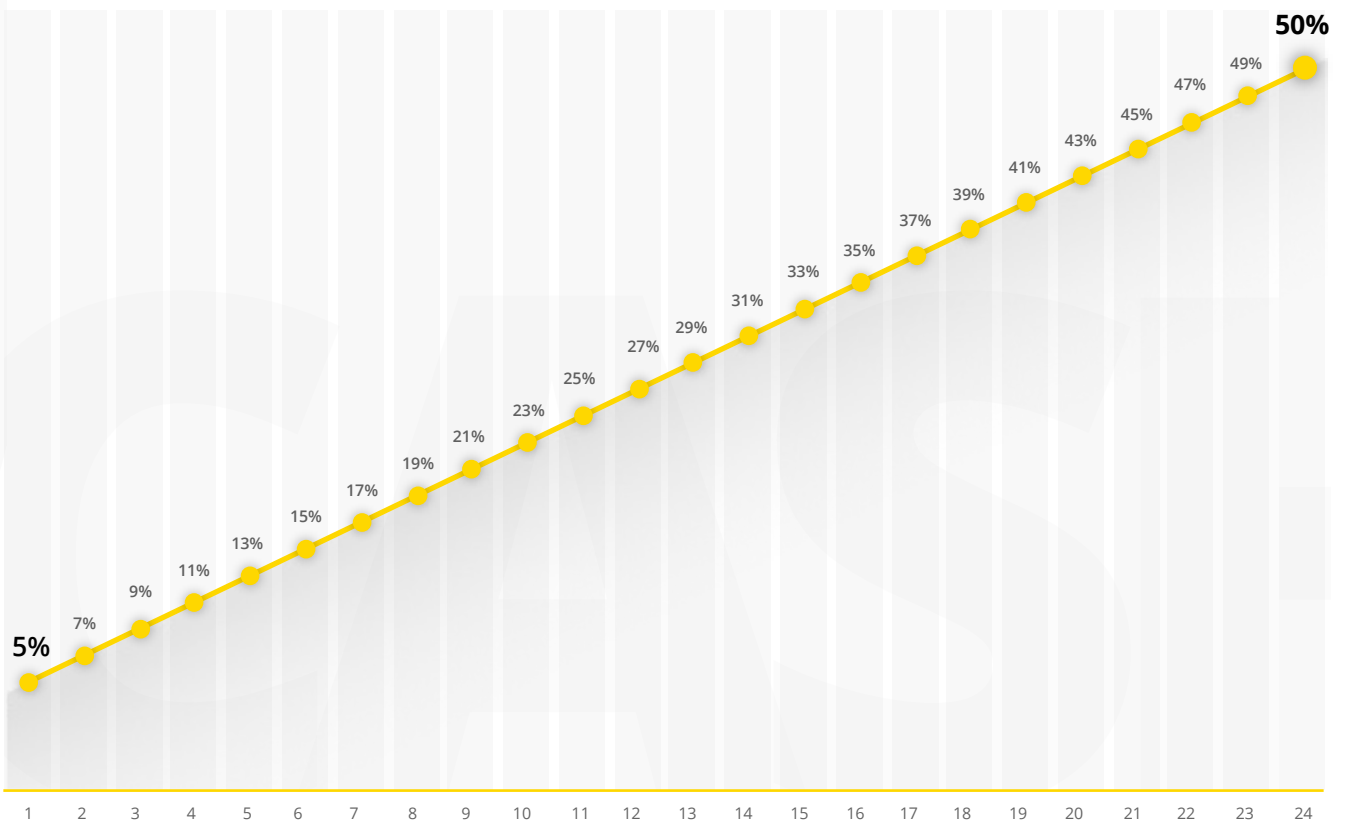

CRPOS is a utilitarian token. This product is not a digital (electronic) currency, value paper, a product or any other type of financial instrument.

It is a way of paying the system's commission.

Crypt2Pos searches for an optimal rate for the current transaction at the current moment in all exchange, integrated with the Crypt2Pos platform and creates a corresponding lot for purchase or sale of cryptocurrency on the chosen exchange. This insures the user gets the best exchange rate for his transactions.

Token holders are provided with commission cash-back for transactions.

Cash-back growth will be as follows:

OpenAPI

By using OpenAPI of Crypt2Pos project it is possible to organize the following services:

- 1). Cryptocurrency wallets
- 2). Cryptocurrency exchange points
- 3). Crypto-systems for online payments
- 4). Loyalty programs
- 5). Payments using cryptocurrency and tokens
- 6). Automatic regular payments
- 7). Systems of account restoration

The team

Members of the Crypt2Pos team are former employees of well-known payment systems, banks and international financial organizations, which have more than 10 years engaged in the development, creation and promotion of payment services and have extensive experience in this field.

Nick Petrovskiy

CEO

Over 10 years of working experience at chief positions in financial companies.

Alexander Dizhanov

CMO

Possesses deep knowledge of internet marketing and positioning of financial products.

Anton Aksatov

CTO

Took part in planning for a couple of international payment systems.

Nina Zamburova

CFO

A professional in accounting and financial statements.

Martin Lobanovskiy

CIO

Cryptofan and blockchain developer is a developer with extensive experience in IT companies.

Vladimir Antonuk

COO

Implemented dozens of international innovation projects.

Maksim Ivashin

BC

Leading project manager and business consultant of our company.

Anna Evseeva

PR

Professional PR manager with experience in international companies.

Conducting ICO

350 million CRPOS tokens will be issued in the framework of ICO.

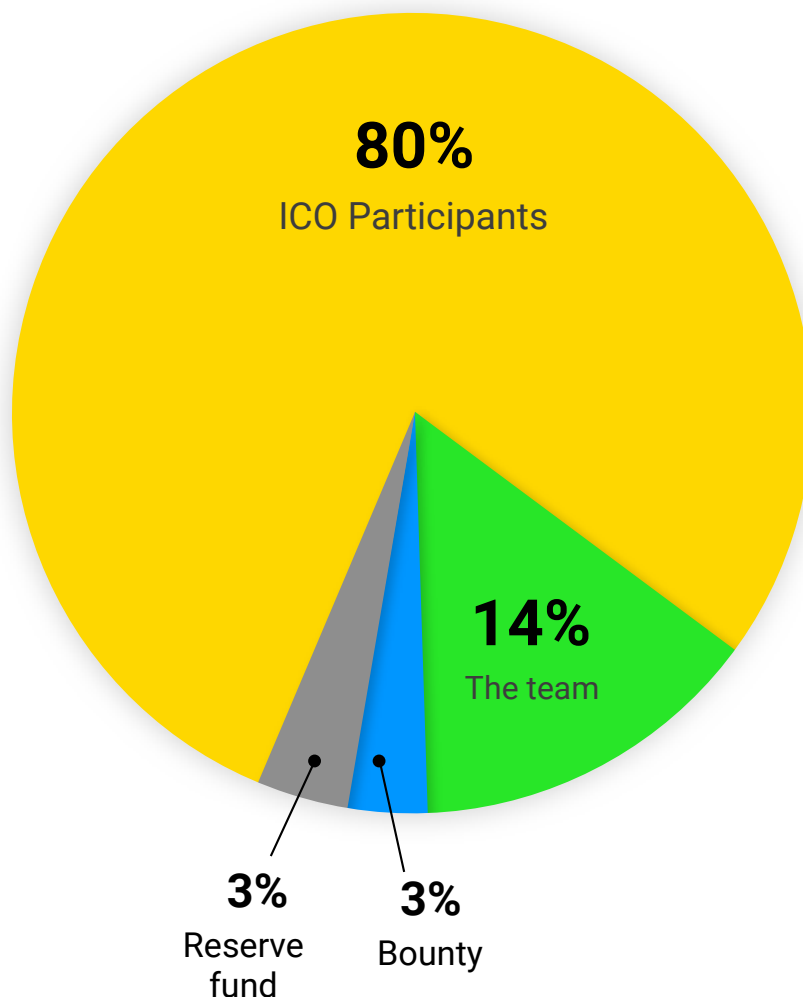

CRPOS is a token based on the ERC20 Ethereum technology. CRPOS tokens will be provided with the ability to conduct surveys and voting based on the platform.

CRPOS tokens may not be used for any other purposes other than the ones stated in this white-paper and on the project's website.

You shouldn't use CRPOS tokens for speculation or other financial goals.

CRPOS tokens are not designed for sale or use in jurisdictions where sale or utilization of digital tokens is prohibited. CRPOS tokens are not shares, value papers or their equivalent, so they do not bestow property or directive rights of CRPOS or its assets upon their holders. CRPOS token holders do not influence decision making of the company or its activities in any way.

Issued token allocation:

Roadmap

Development of the project concept

4 quarter 2017

ICO

February 18th 2018 - April 03th 2018

350 million tokens

Token price \$0.05

Hard 17.5 million dollars

Resources collected at this stage will be directed towards expenses in accordance with the investment allocation plan.

Launch of a marketing company

3 quarter 2018

Product launch

4 quarter 2018

Listing of the CRPOS tokens on the exchange

1 quarter 2019

Allocation of the collected investments

Conditions and provisions

The following document is designed for informational purposes only and does not in any way promote or propose the sale or purchase of tokens. CRPOS tokens do not bestow the control rights. Possession of CRPOS tokens does not bestow upon their holder property or asset right of CRPOS. Even though the opinions and reviews of the community will be taken into account, CRPOS tokens do not give any rights to take part in decision making or any type of business development correlated to CRPOS platform.

Absence of guarantees for obtaining income and profit

All the examples of income and profit, given in this document were made for demonstration of the average industry indicators only and are not a warranty for obtaining the results in accordance with the marketing plan.

Standard ambiguity

Technologies that have anything to do with block-chain are subject to supervision and control from different regulating agencies around the world. CRPOS tokens may fall under one or many inquiries and actions from their part, including but not limited by imposing limitations on the use and ownership of the digital tokens, such as CRPOS, that can slow down or limit the functions or buyout of CRPOS tokens in the future.

CRPOS tokens are not an investment

CRPOS tokens are not any type of official or legally obligated investment. The goals set in this document may be changed due to unexpected circumstances. Even though we are determined to achieve all the points described in this document, all individuals participating in the acquirement of CRPOS tokens do so on their own risk.

Quantum computers

Technical novelties, such as the development of quantum computers may render danger to cryptocurrency, including CRPOS tokens.

Insufficient implementation

Even though CRPOS tokens should not be considered an investment, they may acquire value with time. Their value may also decline if the CRPOS platform feels their insufficient utilization and application.

The risk of bankroll loss

The resources collected during ICO are not insured. In the case of loss of value there is not a private or public insurance representative who the buyer may address.

The risk of Failure

It is completely possible that due to different circumstances, including, but not limited by insolvency of business agreements or marketing strategies the CRPOS platform and all of its following marketing actions considering the collected resources during ICO will not achieve success.

Integration

The following Agreement constitutes a full agreement between the parties considering the subject of the following Contract. All the previous agreements, discussions, presentations, guarantees and conditions are all united in this document. There are no obvious or assumed guarantees, apprehensions, conditions or agreements between parties besides the ones stated in the current Agreement.

The following Agreement may only be changed in written form, properly processed by the parties.

The risk of using new technology

Crypto-tokens such as CRPOS are a new and relatively unchecked technology. In addition to the risks, stated in this document there are also risks, which the team of CRPOS platform can not foresee. These risks may materialize in other forms of risks than the ones described here.

The refusal to give guarantees

You agree that your utilization or inability to utilize CRPOS tokens is done at your own risk and you shirk off all the responsibility from the CRPOS platform. CRPOS tokens will be sent to you from the moment of issue without any obvious or assumed warranty, including the decline of any type of guarantees for all assumed guarantees of commercial value of the current goal, name, without breaking anyone's intellectual property rights, because some jurisdictions do not allow the exception of assumed guarantees, the exceptions of assumed guarantees stated above may not apply to you.
